

BIMLESH

+91-7070519696 | bimlesh.mdb@gmail.com | bimlesharma | bimlesharma | Portfolio

Profile Summary

Full-Stack Software Engineer with production experience building scalable SaaS platforms and complex geospatial web applications. Proven ability to architect multi-tier systems, from distributed backend services and containerized deployments to responsive user interfaces and persistent state management.

Education

- B.Tech in AI & Data Science**, GGSIPU - USAR (2022–2026) CGPA: 8.68

Experience

- Government of India — Software Developer Intern** Jan 2026 – Apr 2026
New Delhi
 - Architected the backend for the Ocean Data Viewer (ODV) using Express.js and GeoServer, enabling offline deployments in secure, air-gapped environments.
 - Engineered high-performance GIS query pipelines using PostGIS ST_Intersects and GiST indexing, handling 50M+ rows per table and reducing query latency to milliseconds.
 - Developed a fully integrated admin dashboard protected by secure JWT authentication, automatic dual-token rotation, and multi-tier RBAC for seamless user management.
 - Built a robust state management system backed by Redis and MongoDB to persist complex user sessions and map viewports.
- Government of India — Software Developer Intern** Jun 2025 – Sep 2025
New Delhi
 - Developed a custom ReactJS and Next.js ENC Viewer to visualize 170+ real-time maritime geospatial layer types.
 - Engineered spatial analysis tools (buffering, intersection) using Turf.js, optimizing algorithms to boost analysts' operational efficiency by 40%.
 - Developed a comprehensive Styled Layer Descriptor (SLD) Editor utilizing GeoServer REST APIs, enabling dynamic styling and customization of map layers.

Projects

- Secure Enterprise SaaS Platform** Nov 2025 – Present
 - Architected a production-grade SaaS platform with a FastAPI backend, orchestrating complex data pipelines and integrating third-party APIs for customizable data retrieval workflows.
 - Built an end-to-end search pipeline using FAISS vector indexing and Redis-based semantic caching, reducing retrieval latency by 60%.
 - Implemented a spaCy-driven PII sanitization layer to filter sensitive data prior to processing, ensuring enterprise-grade data governance.
 - Designed a scalable multi-tenant architecture utilizing Auth0 for RBAC and MongoDB Atlas for knowledge base management.
- ListPeers — Privacy-First Academic Analytics Platform** Dec 2025 – Jan 2026
 - Built a consent-driven academic analytics platform using Next.js, featuring responsive dashboards and peer comparison views to visualize SGPA/CGPA trends.
 - Implemented frontend-controlled visibility modes with real-time UI updates, backed by Supabase Auth (OAuth) and optimized client-side data fetching.
 - Enforced strict privacy boundaries by collaborating on backend logic utilizing Row-Level Security (RLS) and consent-gated APIs for safe data access.

Technical Skills

- Languages:** Python, JavaScript, TypeScript, C/C++, Go, SQL
- Frontend:** React.js, Next.js, Tailwind CSS, Zustand, Redux, Jest
- Backend:** Node.js, Express.js, FastAPI, GeoServer, Microservices, REST APIs, GraphQL
- Cloud & DevOps:** Docker, Nginx, AWS EC2, AWS S3, VPS Deployment, Supabase, Auth0
- Databases:** MongoDB, PostgreSQL, PostGIS, Redis Stack, FAISS, Qdrant

Achievements

- MLH Track Winner** — HackCBS 8.0 (2025) — Recognized for best use of Auth0 and GenAI.
- Top 10 Global Finalist** — GSMA Gateway Hackathon | Nokia's Network as Code Challenge (2025).
- Finalist** — Smart India Hackathon 2024 (PS: SIH1682).
